Silicon Valley Power

DATA CENTER REBATE

Maximize Your Data Center Energy Efficiency

Powering The Center of What's Possible

Data centers are high energy users, but there are ways to reduce energy use by increasing the efficiency of the cooling system. By developing a plan to review your operations and implement best practices, you can reduce energy consumption, increase reliability and help reach your sustainability goals. Silicon Valley Power (SVP) offers a Data Center Rebate program to assist with the cost of the improvements up to $1,500,000 per project.

GET STARTED

Schedule a walk-through of your facility with an SVP Energy Engineer to help identify opportunities to improve the efficiency and operation of your data center, quantify potential rebates and guide you through the rebate application process.

MEASUREMENT AND VERIFICATION PLAN

SVP will coordinate with you and your contractors to create a customized measurement and verification (M&V) plan to confirm the realized energy savings and maximize your rebate.

PAY FOR PERFORMANCE INCENTIVE

Eligible projects can receive a rebate based on verified energy savings, paid over 5 payments.

EXAMPLE PROJECTS

- ✓ **Hot/cold aisle containment**
- ✓ **High efficiency chillers**
- ✓ **Energy efficient lighting**
- ✓ **VFDs and controls on CRAH or CRAC units**

CONTACT SVP TO GET STARTED

Pre-approval is required for the program.
